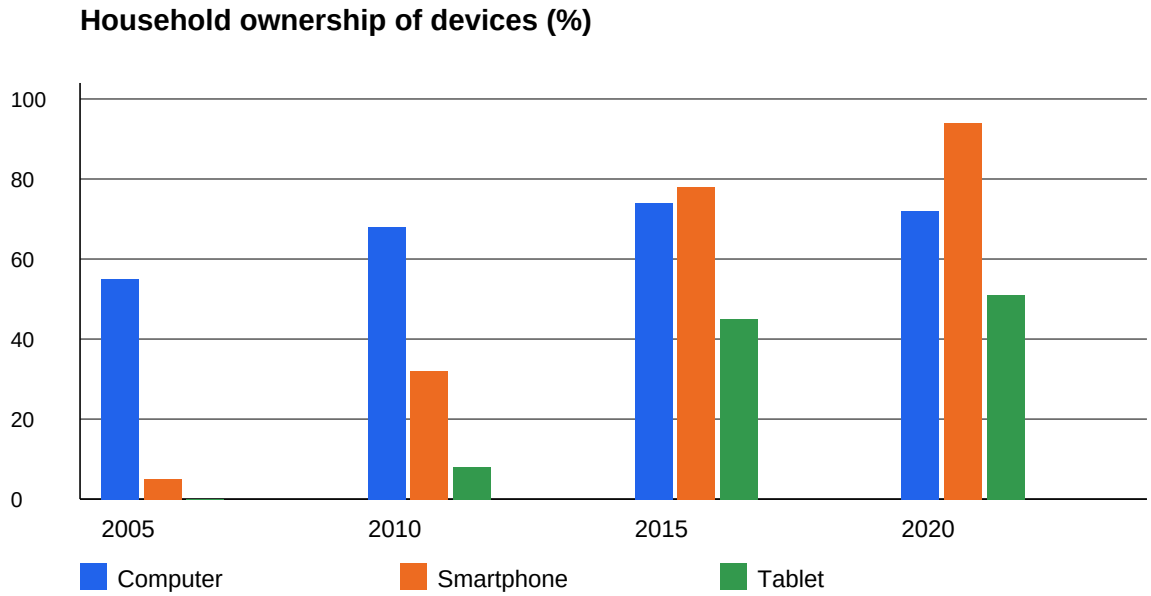
WRITING TASK 1

You should spend about 20 minutes on this task.

The chart below shows the percentage of households in one country that owned a computer, a smartphone and a tablet in 2005, 2010, 2015 and 2020.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.



Model answer

The bar chart compares how many households in one country owned three kinds of device between 2005 and 2020.

Overall, smartphones showed the most dramatic change, rising from almost none to nearly every household, while computer ownership grew only slightly and then levelled off.

In 2005, just over half of households (55%) had a computer, whereas only 5% owned a smartphone and tablets were not yet available. By 2010 the figure for computers had risen to 68%, and smartphone ownership had climbed to around a third.

The following decade saw smartphones overtake computers. In 2015, 78% of homes had a smartphone, compared with 74% for computers, and by 2020 the proportion with a smartphone had reached 94%. Tablets, meanwhile, became popular after 2010, rising to 45% in 2015 and 51% in 2020. Computer ownership, in contrast, fell slightly to 72% in the final year.
